

Instructions to Prepare Camera-ready Papers

For the camera-ready paper, please make sure that you follow the next instructions

1. Install the package `fancyhdr.sty`. The `aistats.sty` file will make use of it.
2. Begin your document with

```
\documentclass[twoside]{article}
\usepackage[accepted]{aistats2e}
```

The `twoside` option for the class `article` allows the package `fancyhdr.sty` to include headings for even and odd numbered pages. The option `accepted` for the package `aistats.sty` will write a copyright notice at the end of the first column of the first page.

3. After `\begin{document}`, write

```
\begin{document}
\runningtitle{Provide here the title of your paper}
\runningauthor{Provide here the surnames of the authors of your paper, all
separated by commas}
\checkheadings
```

The text that appears as argument in `\runningtitle` will be printed as a heading in the *even* pages. The text that appears as argument in `\runningauthor` will be printed as a heading in the *odd* pages.

If the title of your paper is too long, `\checkheadings` will print a warning message as heading title instead. The same will happen if there are too many authors appearing as argument in `\runningauthor`.

If a warning message is printed, please provide shorter versions of your paper's title and/or paper's authors, inside `\runningtitle` and/or `\runningauthor`.

4. Use the `sample2e.tex` as an example.
5. Please, don't change the layout given by the style file. If you have any question contact the publications chair.
